

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Original) A method of information processing comprising:  
copying plural objects;  
performing a semantic analysis on each of the plural objects;  
selecting paste targets which match with results of the semantic analysis;  
and  
pasting the plural objects to the paste targets.
2. (Original) The method of information processing according to claim 1, wherein  
the copying includes copying the plural objects from a copy module according to a copy instruction of a user, and  
the selecting includes selecting the paste target from a paste module according to a paste instruction of the user.
3. (Original) The method of information processing according to claim 2, wherein  
the copying includes issuing the copy instruction by one user operation, and  
the selecting includes issuing the paste instruction by one user operation.
4. (Currently Amended) The method of information processing according to claim 2  
~~or 3~~, wherein  
the selecting includes selecting the paste target based on a result of analysis of a semantic distance between objects in the copy module and the paste module.
5. (Original) The method of information processing according to claim 4, wherein  
the copying includes copying plural objects with a structural association from the copy module based on the copy instruction, and

the selecting includes selecting the paste target with a structural association from the paste module based on the paste instruction.

6. (Currently Amended) The method of information processing according to claim 2 ~~or 3~~, wherein

the copying includes copying the plural objects in a predetermined range from the copy module based on the copy instruction, and

the selecting includes selecting the paste target in a predetermined range from the paste module based on the paste instruction.

7. (Currently Amended) The method of information processing according to ~~any one~~ of claims 2 ~~to 6~~, wherein

the copying includes issuing the copy instruction by a voice of the user, and

the selecting includes issuing the paste instruction by a voice of the user.

8. (Currently Amended) The method of information processing according to ~~any one~~ of claims 2 ~~to 6~~, wherein

the copying includes issuing the copy instruction by a voice of the user and a pointer manipulated by the user, and

the selecting includes issuing the paste instruction by the voice of the user and the pointer manipulated by the user.

9. (Currently Amended) The method of information processing according to ~~any one~~ of claims 2 ~~to 8~~, wherein

the copying includes showing a candidate of the plural objects to the user for acceptance, and when the user does not accept the candidate, re-exhibiting another candidate of the plural objects to the user until the user accepts the candidate.

10. (Currently Amended) The method of information processing according to ~~any one~~ of claims 2 ~~to 9~~, wherein

the selecting includes exhibiting a candidate of the paste target to the user for acceptance, and when the user does not accept the candidate, re-exhibiting another candidate of the paste target to the user until the user accepts the candidate.

11. (Currently Amended) The method of information processing according to ~~any one~~ of claims 2 to 10, wherein

the copy instruction and the paste instruction are provided by an instruction device which has a communication function between the copy module and the paste module.

12. (Currently Amended) A computer program product of information processing for making a computer execute the method of information processing according to claim 1 ~~one of~~ ~~claims 1 to 11~~.

13. (Original) An information processing apparatus comprising:  
a copying unit that copies plural objects;  
a semantic analysis performing unit that performs a semantic analysis of each of the plural objects;  
a paste target selecting unit that selects paste targets which match with results of the semantic analysis; and  
a pasting unit that pastes the plural objects to the paste targets.

14. (Original) The information processing apparatus according to claim 13, wherein  
the copying unit copies the plural objects from a copy module according to a copy instruction of a user, and  
the paste target selecting unit selects the paste targets from a paste module according to a paste instruction of the user.

15. (Original) The information processing apparatus according to claim 14, wherein  
the copying unit issues the copy instruction by one user operation, and  
the paste target selecting unit issues the paste instruction by one user operation.

16. (Currently Amended) The information processing apparatus according to claim 14 ~~or claim 15~~, wherein  
the paste target selecting unit selects the paste targets based on a result of analysis of a semantic distance between objects in the copy module and the paste module.
17. (Original) The information processing apparatus according to claim 16, wherein  
the copying unit copies the plural objects with structural association from the copy module based on the copy instruction, and  
the paste target selecting unit selects the paste target with structural association from the paste module based on the paste instruction.
18. (Currently Amended) The information processing apparatus according to claim 14 ~~or 15~~, wherein  
the copying unit copies the plural objects in a predetermined range from the copy module based on the copy instruction, and  
the paste target selecting unit selects the paste target in a predetermined range from the paste module according to the paste instruction.
19. (Currently Amended) The information processing apparatus according to ~~any one~~ of claims 14 ~~to 18~~, wherein  
the copying unit issues the copy instruction according to a voice of the user, and  
the paste target selecting unit issues the paste instruction according to the voice of the user.
20. (Currently Amended) The information processing apparatus according to ~~any one~~ of claims 14 ~~to 18~~, wherein  
the copying unit issues the copy instruction according to a voice of the user and a pointer manipulated by the user, and  
the paste target selecting unit issues the paste instruction according to the voice of the

user and the pointer manipulated by the user.

21. (Currently Amended) The information processing apparatus according to ~~any one~~ of claims 14 ~~to 20~~, wherein

the copying unit shows a candidate of the plural objects to the user for acceptance, and when the user does not accept the candidate, re-exhibits another candidate of the plural objects to the user until the user accepts the candidate.

22. (Currently Amended) The information processing apparatus according to ~~any one~~ of claims 14 ~~to 21~~, wherein

the paste target selecting unit shows a candidate of the paste target to the user for acceptance, and when the user does not accept the candidate, re-exhibits another candidate of the paste target to the user until the user accepts the candidate.

23. (Currently Amended) The information processing apparatus according to ~~any one~~ of claims 14 ~~to 22~~, wherein

the copy instruction and the paste instruction are provided by an instruction device which has a communication function between the copy module and the paste module.

24. (Currently Amended) A remote controller which executes the method of information processing according to claim 1 ~~one of claims 1 to 11~~.
